

METHOD, SYSTEM, AND PROGRAM FOR PROVIDING USER
LOCATION INFORMATION WITH A PERSONAL INFORMATION MANAGEMENT
PROGRAM

ABSTRACT

- 5 Provided is a method, system, program, and data structures for providing user location
information with a personal information manager program. Position coordinates of a wireless
device associated with a user are generated, along with time information indicating a time when
the position coordinates were generated. The position coordinates and time information are
processed to determine geographic locations and associated time periods. For each
10 determined geographical location and associated time period, the user of the wireless device
was located at the geographical location for the associated time period. A request is received
for information on the user for a selected time interval. A determination is then made of time
periods associated with geographic locations that are within the selected time interval.
Information is then generated on the geographic locations and associated time periods that are
15 within the selected time interval.
